Table 3. Official HDI, country-level MHDI and its health, education and standard of living components calculated from IPUMS census samples. The values of EI for Rwanda 1991 and the values of WI for Mali and Malawi 1987 are not strictly comparable, as slightly different definitions of these indices have been used for those censuses (they are written in italics to distinguish them from the other values). NA = 'Not available'. Source: Authors' calculations using IPUMS-International microdata.

Table 4. Gini index for the M HDI, HI, EI and WI distributions. Percent contribution of the health, education and standard of living components to inequality in the M HDI distribution. Source: Authors' calculations using IPUMS-International microdata.

## Figures

Figure 1. Comparison of ALR (vertical axis) and proportion of adults with less than five years of schooling at the country level (horizontal axis). The dashed line is the 45° equality line. The solid line is the best linear fit line. Countries are labeled with the ISO 3166 codes plus the last two digits of the year in which the corresponding census was conducted. Authors' calculations using IPUMS-International microdata for 18 African censuses.

Figure 2. Comparison of Gross Enrolment Ratio (horizontal axis) and Primary completion rates (vertical axis). The dashed line is the 45° equality line. The solid line is the best linear fit line. Countries are labeled with the ISO 3166 codes plus the last two digits of the year in which the corresponding census was conducted. Authors' calculations using IPUMS-International microdata.

Figure 3. Comparison of the core Wealth Index (horizontal axis) versus the country specific Wealth Index (vertical axis). The dashed line is the 45° equality line. The solid line is the best linear fit line. Countries are labeled with the ISO 3166 codes plus the last two digits of the year in which the corresponding census was conducted. Authors' calculations using IPUMS-International microdata.

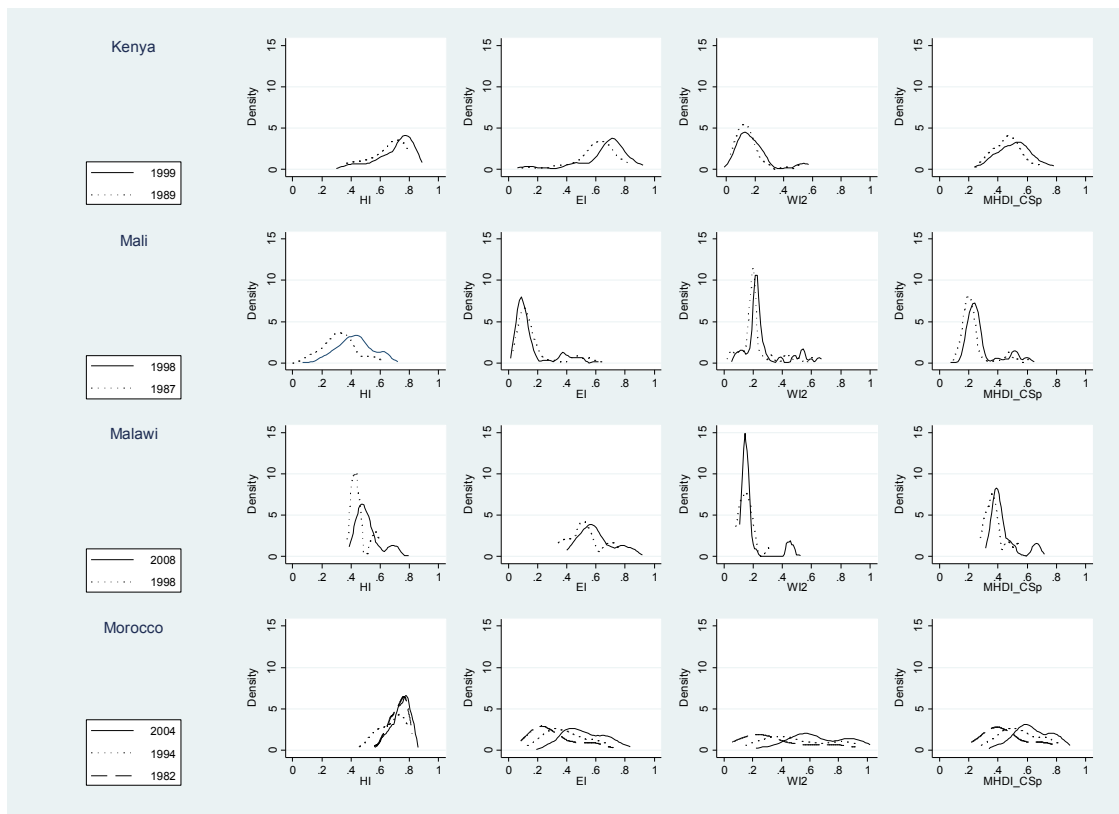

Figure 4. Density functions of the health, education, wealth and human development distributions for Kenya, Mali, Malawi and Morocco. The wealth and human development distributions have been constructed using country specific definitions. Authors' calculations using IPUMS-International microdata.

Figure 4 (Continued). Figure 4. Density functions of the health, education, wealth and human development distributions for Rwanda, Tanzania, Uganda and South Africa. The wealth and human development distributions have been constructed using country specific definitions. Authors' calculations using IPUMS-International microdata.

Figure 5. Country-level MHDIs values (right vertical axis) with the corresponding percent contributions of the health, education and standard of living components (left vertical axis). Source: Authors' calculations using IPUMS-International microdata.

Figure 6. Country level MHDH (horizontal axis) vs UNDP's HDI values (vertical axis). The dashed line is the equality line. The solid one is the best linear fit line. Countries are labeled with the ISO 3166 codes plus the last two digits of the year in which the corresponding census was conducted. Source: Authors' calculations using IPUMS-International microdata and HDRs data.

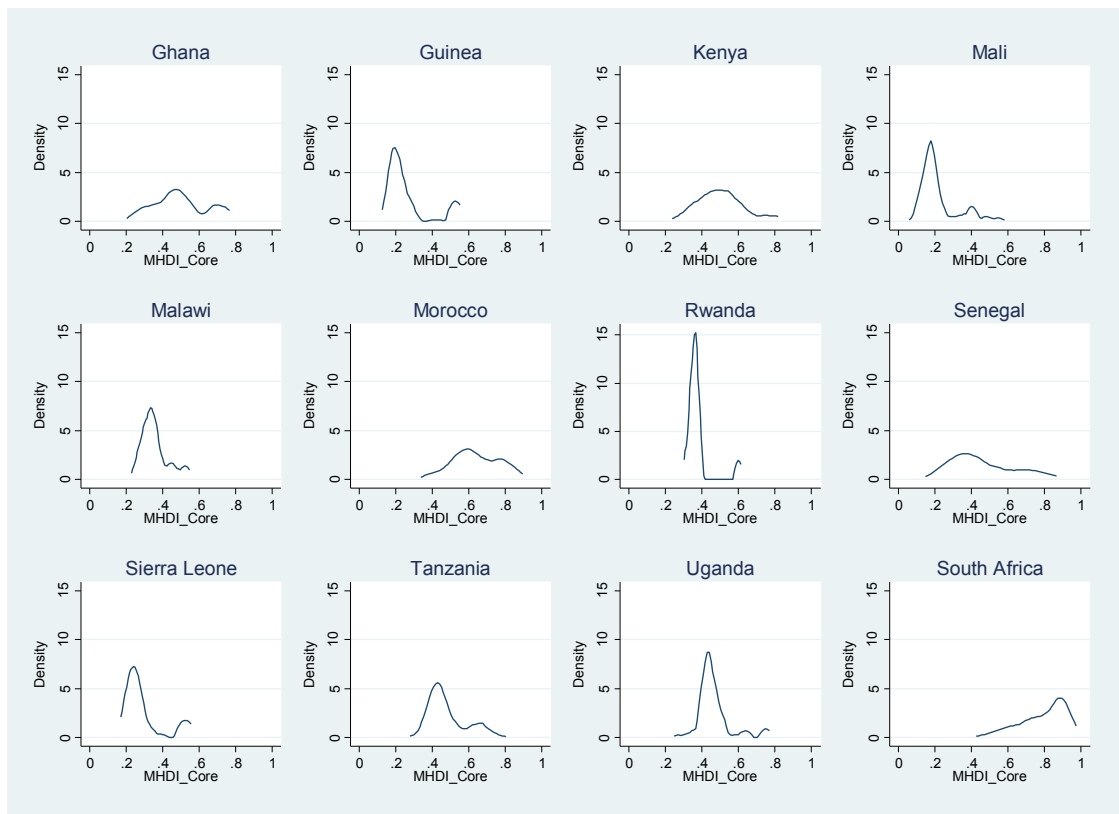

Figure 7. Density functions of the MHDl distributions for the 12 African countries included in the analysis around year 2000 (Ghana 2000, Guinea 1996, Kenya 1999, Malawi 1998, Mali 1998, Morocco 2004, Rwanda 2002, Senegal 2002, Sierra Leone 2004, South Africa 2001, Tanzania 2002, Uganda 2002). Source: Authors' calculations using IPUMS-International microdata.
